Description

+GF+ SIGNET Conductivity/Resistivity Sensors are designed to provide versatile installation and accurate sensing across a very broad dynamic range. Coupled with +GF+ SIGNET-patented measuring circuitry a three decade range with $\pm 2\%$ of reading accuracy is

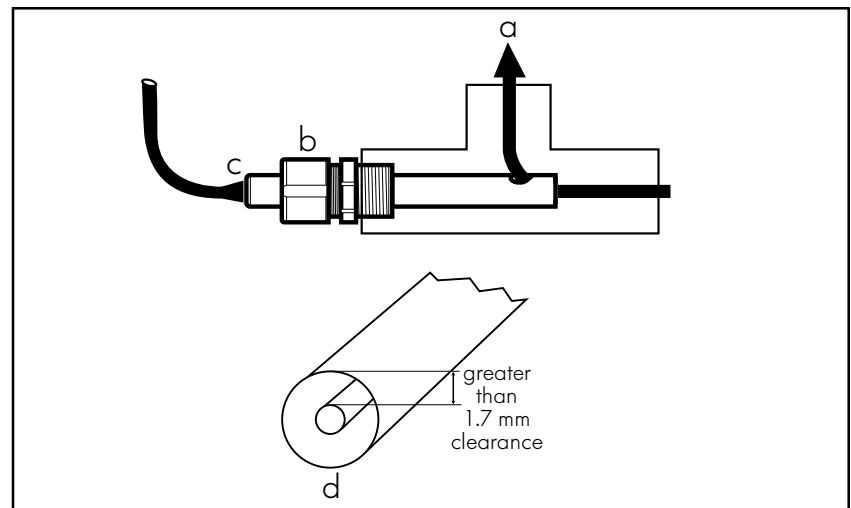

achieved without the need for troublesome sensor platinization. Platinum RTD (PT-1000) properly located within the sensor allows optimal temperature sensing. Standard wiring allows connection without costly "patch cords."
